

LAVA Project Update

Paul Larson
< paul.larson@linaro.org >

About LAVA

- Framework used by Linaro for automated testing
- Extensible web frontend
- Device management and automated deployment
- APIs and command line tools
- Tools for automating test suites on Ubuntu and Android based Linaro builds
- Support for many popular low-cost ARM dev boards
 - beagleXM, Panda, Snowball, Origen, mx51evk, mx53qs...
 - Support for new boards is easy to add

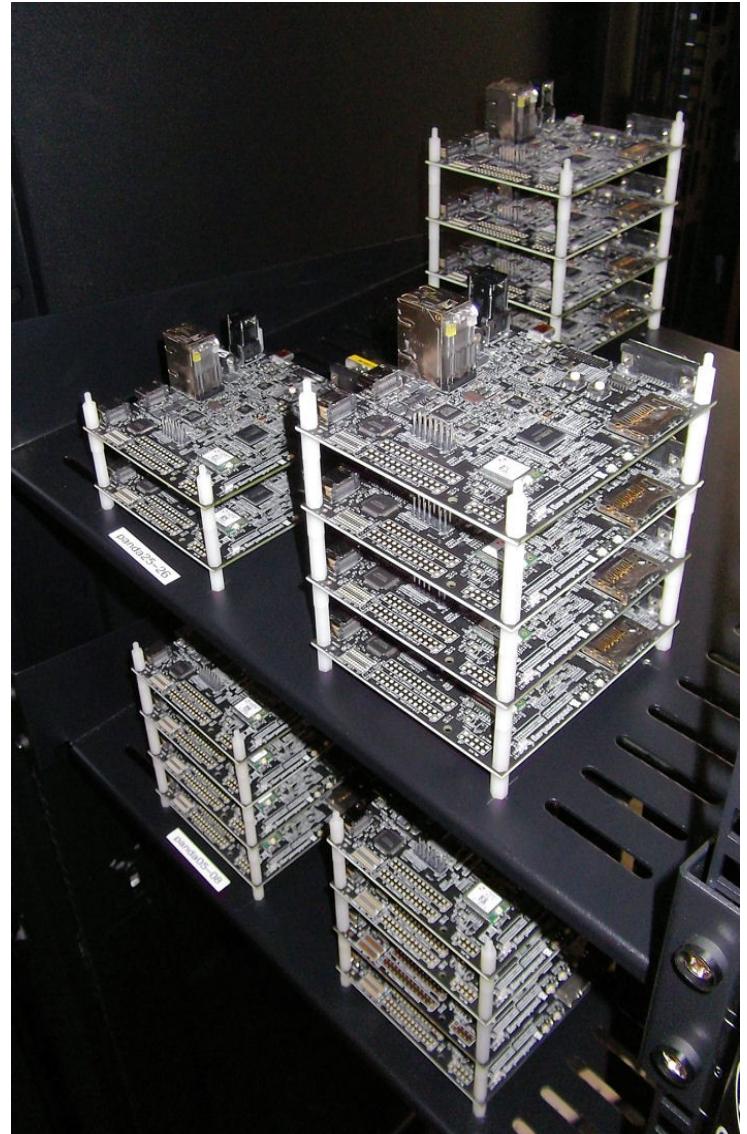

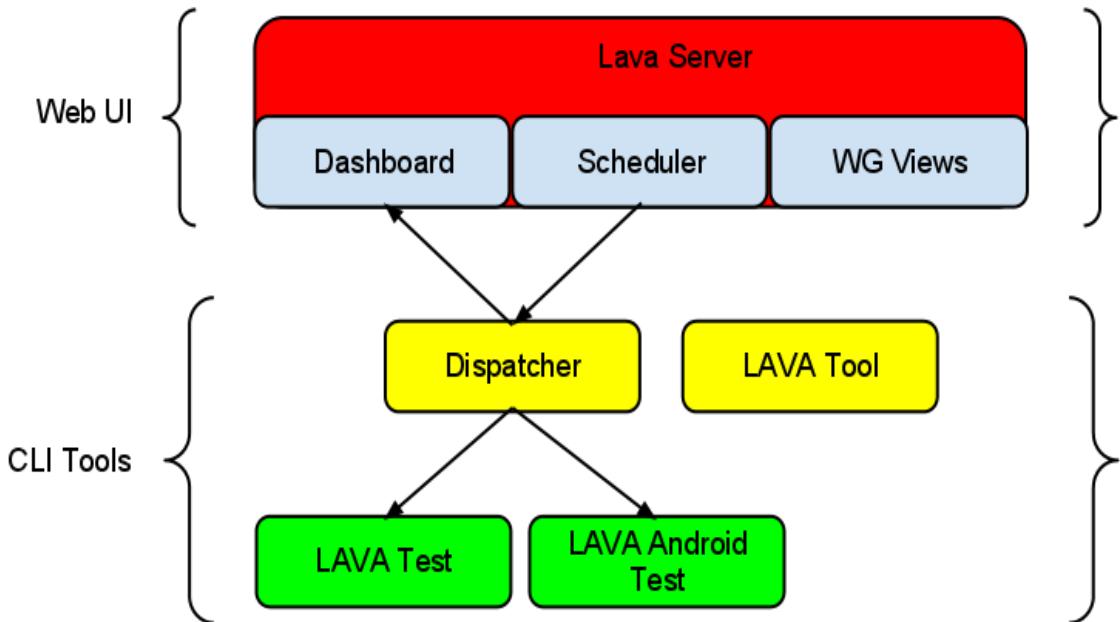

How Linaro Uses LAVA

- Daily automated tests of multiple images and hardware packs on Linaro member hardware
- Automated tests of new kernels/features
- Android continuous integration testing
- Kernel continuous integration testing
- Platform enablement tests

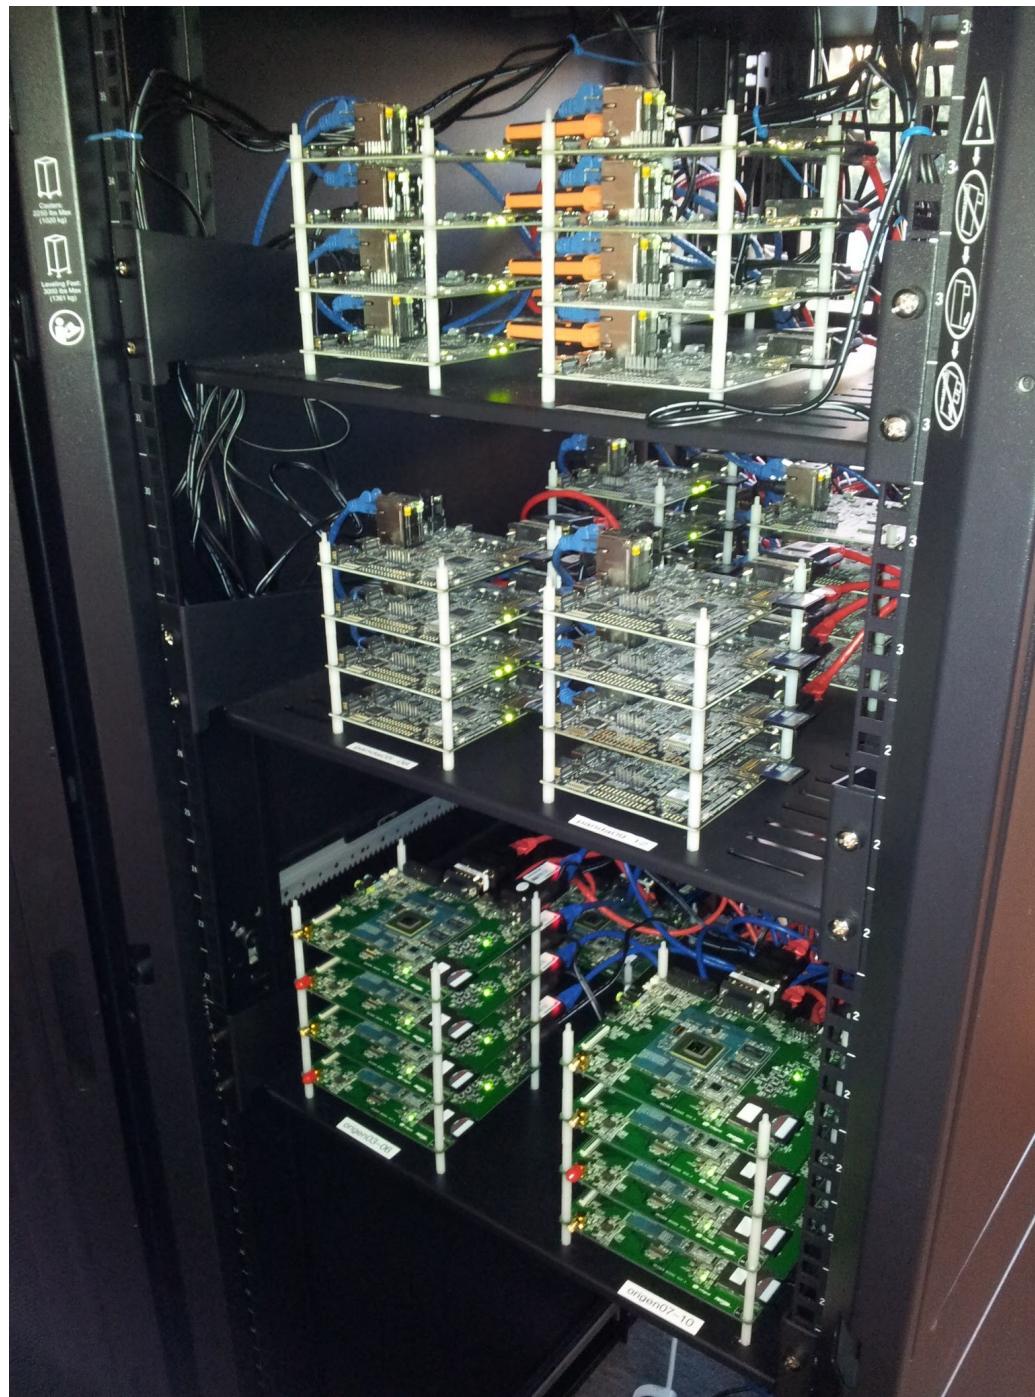

LAVA Architecture

Hardware Components

- Server(s)
- Network infrastructure
- Console servers
- Networked PDUs
- Racks of ARM Boards

Linaro

LAVA Components

- LAVA Server
- LAVA Dashboard
- LAVA Scheduler
- LAVA Dispatcher
- LAVA Test / LAVA Android Test

LAVA Scheduler

- Primary entry point for test jobs
- Displays current device status and current job status
- Provides XML-RPC API for job submission
- Provides command-line tools for job submission

The screenshot shows the LAVA Scheduler interface at validation.linaro.org/lava-server/scheduler/. The top navigation bar includes links for LAVA, Android Benchmarks, Dashboard, Kernel CI, Projects, Scheduler, API, and Documentation, along with a sign-in option.

The main content area has two sections:

- Devices**: A table listing 10 entries (out of 50 total) with columns for Hostname, Type, and Status. The entries are:

Hostname	Type	Status
vexpress-a902	vexpress-a9	Idle
vexpress-a901	vexpress-a9	Offline
snowball03	snowball_sd	Idle
snowball02	snowball_sd	Offline
snowball01	snowball_sd	Idle
panda24	panda	Idle
panda23	panda	Idle
panda22	panda	Idle
panda21	panda	Idle
panda20	panda	Idle
- Active Jobs**: A table showing 1 entry (out of 1 total) with columns for ID, Status, Device, Description, Submitter, and Submit Time. The entry is:

ID	Status	Device	Description	Submitter	Submit Time
12432	Running	panda08	https://android-build.linaro.org/jenkins/job/linaro-android_panda-ics-gcc44-aosp-stable-blob/65/	android-build-system	Feb. 15, 2012, 4:44 a.m.

LAVA Scheduler

- Device Details
- Admin functions for taking boards offline for maintenance

The screenshot shows a web browser window for the LAVA Scheduler. The URL is validation.linaro.org/lava-server/scheduler/device/origin01. The page title is "LAVA | Scheduler | Device". The top navigation bar includes links for LAVA, Android Benchmarks, Dashboard, Kernel CI, Projects, Scheduler, API, Documentation, and a user profile for "Paul Larson". A breadcrumb trail indicates the current location: You are here: LAVA » Scheduler » Device origin01.

Device details for "origin01" are displayed, including:

- Hostname: origin01
- Status: Idle
- Device type: origin
- Device Tags: audio-loopback

A "Put into maintenance mode" button is present.

A table lists scheduled jobs for the device:

ID	Status	Device	Submitter	Start Time	Finish Time
12427	Complete	origin01	android-build-system	Feb. 15, 2012, 1:51 a.m.	Feb. 15, 2012, 2:14 a.m.
12337	Complete	origin01	lava-auto	Feb. 14, 2012, 7:56 a.m.	Feb. 14, 2012, 11:20 a.m.
12334	Complete	origin01	lava-auto	Feb. 14, 2012, 7 a.m.	Feb. 14, 2012, 7:56 a.m.
12230	Complete	origin01	lava-auto	Feb. 13, 2012, 7:30 a.m.	Feb. 13, 2012, 10:14 a.m.
12227	Complete	origin01	lava-auto	Feb. 13, 2012, 7 a.m.	Feb. 13, 2012, 7:30 a.m.
12113	Complete	origin01	lava-auto	Feb. 12, 2012, 10:56 a.m.	Feb. 12, 2012, 12:16 p.m.
12110	Complete	origin01	lava-auto	Feb. 12, 2012, 7 a.m.	Feb. 12, 2012, 10:56 a.m.
12068	Incomplete	origin01	ciadmin	Feb. 11, 2012, 9:26 a.m.	Feb. 11, 2012, 11:52 a.m.
11999	Complete	origin01	lava-auto	Feb. 11, 2012, 7:42 a.m.	Feb. 11, 2012, 9:26 a.m.
11996	Complete	origin01	lava-auto	Feb. 11, 2012, 7 a.m.	Feb. 11, 2012, 7:42 a.m.

Showing 1 to 10 of 226 entries

LAVA Scheduler

- Live monitoring of jobs in progress
- Job Cancellation
- Results link (once the job is complete)

The screenshot shows a web browser window titled "Nium Web Browser" displaying the LAVA Scheduler interface at validation.linaro.org/lava-server/scheduler/job/12432. The page is titled "Job #12432".

Job information:

- Submitted by: android-build-system
- Requested type: panda
- Description: https://android-build.linaro.org/jenkins/job/linaro-android_panda-ics-gcc44-aosp-stable-blob/65/
- Status: Running
- On device: panda08
- Submitted at: Feb. 15, 2012, 4:44 a.m.
- Started at: Feb. 15, 2012, 4:44 a.m.
- Finished at: not finished

Views:

- Summary
- Complete log

```

LAVA Dispatcher

- Talks to the individual test devices
- Based around running predefined 'actions'
 - Actions do things like deploying images, running tests, and submitting results
 - Actions can take parameters
 - New actions can be added in-tree, or as plugins
- Currently supports Linaro and Android image deployments
- Local board configuration details are stored in config files
 - inheritance for board type config, specific board config
- Can be used standalone, or kicked off by the scheduler daemon

LAVA Test

- Provides a uniform interface for installing tests, running them, and parsing results
- Test wrappers act as the "glue" between individual test suites and LAVA
- Supports out-of-tree tests for tests that can't be included
- Test parameter defaults can be overridden
- Can be used standalone for convenient local execution

LAVA Android Test

- Provides the Above functionality for Android testing
- Uses ADB to talk to Android devices rather than running locally

LAVA Dashboard

- Storage and retrieval of raw test results and attachments
- Provides XML-RPC API for results submission
- Provides command-line interface to the API

Some Terminology:

- Bundle Stream - A way of organizing related result bundles
- Result Bundle - a set of results submitted after a testing session, can contain multiple test runs, as well as other information about the system where the testing was performed
- Test Run - The results from a single test suite
- Test Case - The individual id and result of a single test within a test run

LAVA Server

- Server framework for LAVA web components
 - Ties together all the previous web components we've discussed
- Extensions can be written to add functionality
- Dashboard and Scheduler are the primary extensions
- Extensions can also be written to do things like special data or results handling (example: Kernel CI results)

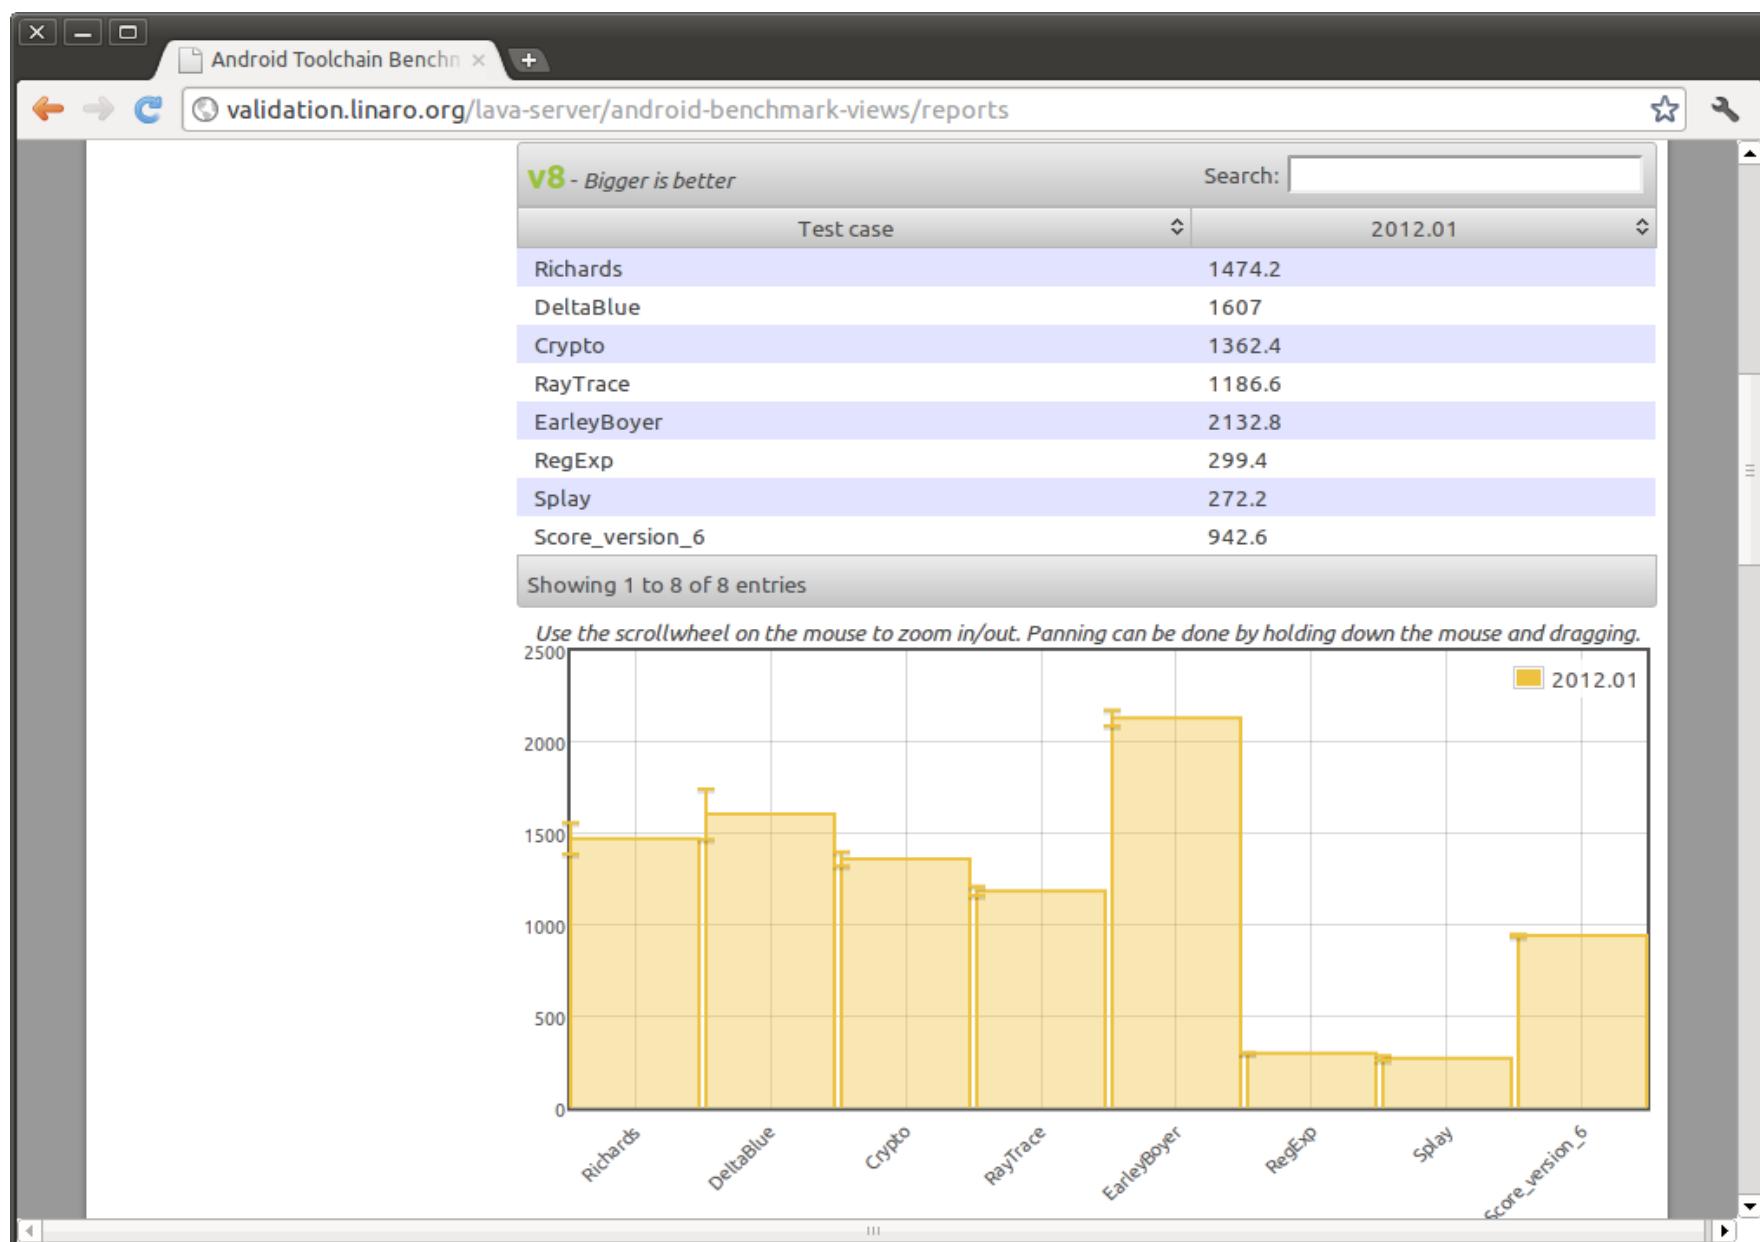

Extending LAVA Server

- You can use existing data in other extensions
 - Such as the dashboard or scheduler data
- Add new models for storing new things, or denormalizing existing data
- Create new views for visualizing your data
- Add new features not provided elsewhere
- Extend the xmlrpc API

An example: Android Benchmarks

Android CI Loop

- Linaro android-build system - frontend to Jenkins
- Submit test job to LAVA Scheduler if successful
 - Test results submitted to LAVA Dashboard

The screenshot shows a web browser window titled "Linaro Android Build Service". The URL in the address bar is https://android-build.linaro.org. The page features the Linaro logo and the text "Linaro Android Build Service". Below this is a search bar with "Search:" and a dropdown menu set to "Any". There are three tabs: "Official Builds" (selected), "My Builds", and "All Builds". A table displays a list of builds with columns: Status, Name, Build Started, and Build Finished. The builds listed are:

Status	Name	Build Started	Build Finished
OK	~linaro-android/origin-ics-gcc46-samsunglt-stable-blob	2012-02-14 00:34:39	2012-02-14 02:39:44
OK	~linaro-android/imx53-ics-gcc46-freescalelt-stable-open	2012-02-12 20:00:33	2012-02-12 21:53:08
OK	~linaro-android/panda-ics-gcc46-tilt-tracking-blob	2012-02-12 20:00:33	2012-02-12 21:51:21

OK	~linaro-android/panda-ics-gcc46-tilt-stable-blob	2012-02-12 17:00:33	2012-02-12 19:13:23

Android CI Loop

- JSON view of test results referenced by job id
- Results can be displayed on the android-build summary page

The screenshot shows a web browser window displaying test results from the Linaro Android Build Service. The URL in the address bar is <https://android-build.linaro.org/builds/~linaro-android/landing-snowball-12.01-release/>. The page title is "Linaro Android Build Service". The main content area is titled "Test results" and shows a table of measurements. The table has columns for Name, Pass, Fail, and Measurement. There are three rows: one for the "java" suite, one for the "Oxbench" suite, and one for the "monkey" suite. The "java" row has 7 passes and 0 fails. The "Oxbench" row has 19 passes and 0 fails. The "monkey" row has 1 pass and 0 fails. The "Measurement" column lists various benchmarks and their values.

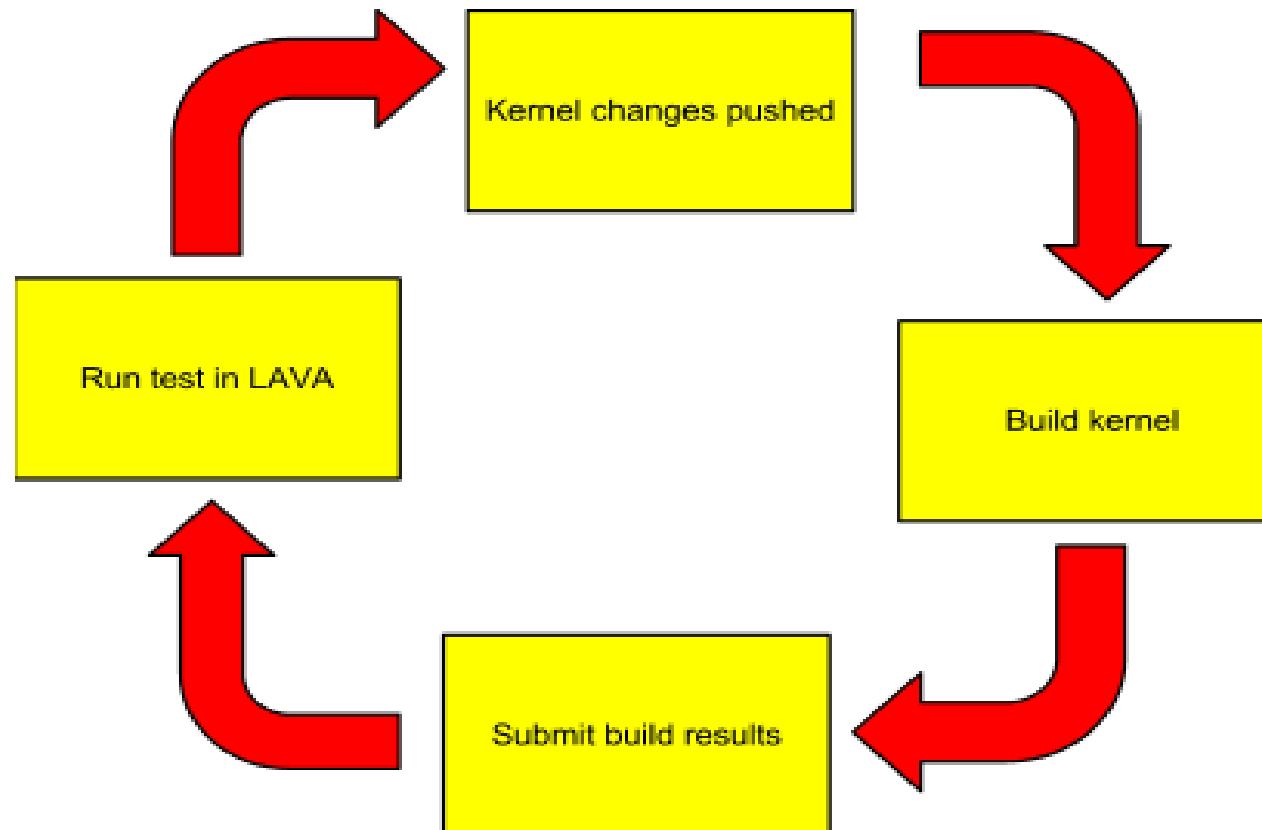

Name	Pass	Fail	Measurement		
java	7	0	DrawArc	35.5471223671	2d-fps
			DrawCanvas	59.3749505201	2d-fps
			DrawCircle	55.9734772176	2d-fps
			DrawCircle2	28.2527852268	2d-fps
			DrawImage	17.6030857160	2d-fps
			DrawRect	18.6739938554	2d-fps
			DrawText	57.3814713150	2d-fps
			FlyingTeapot	31.7409943386	3d-fps
Oxbench	19	0	GarbageCollection	5221.00000000000	msec
			Linpack	32.5726234210	mflops
			OpenGLBlending	63.5428185332	3d-fps
			OpenGLCube	58.7786328782	3d-fps
			OpenGLFog	62.1017218057	3d-fps
			Scimark2COMPOSITE	52.7872350553	mflops
			Scimark2FTT	33.7507861784	mflops
			Scimark2LU	63.3271506101	mflops
			Scimark2MONTECARLO	9.7712381628	mflops
			Scimark2SOR	122.5798404688	mflops
			Scimark2PARSEMATMULT	34.5071598563	mflops
monkey	1	0	monkey	1666.0000000000	ms

Kernel CI Results View

Installing LAVA

```
$ bzr branch lp:lava-deployment-tool
```

- Handles deployment of any LAVA component and dependencies
- Uses pypi and virtualenv
- Multiple instances allowed on the same server
- Sets up databases
- Copies everything needed (with dependencies) for offline installs
- Backup/Restore commands
- Upgrades supported

Installing LAVA

```
$ lava-deployment-tool setup
```

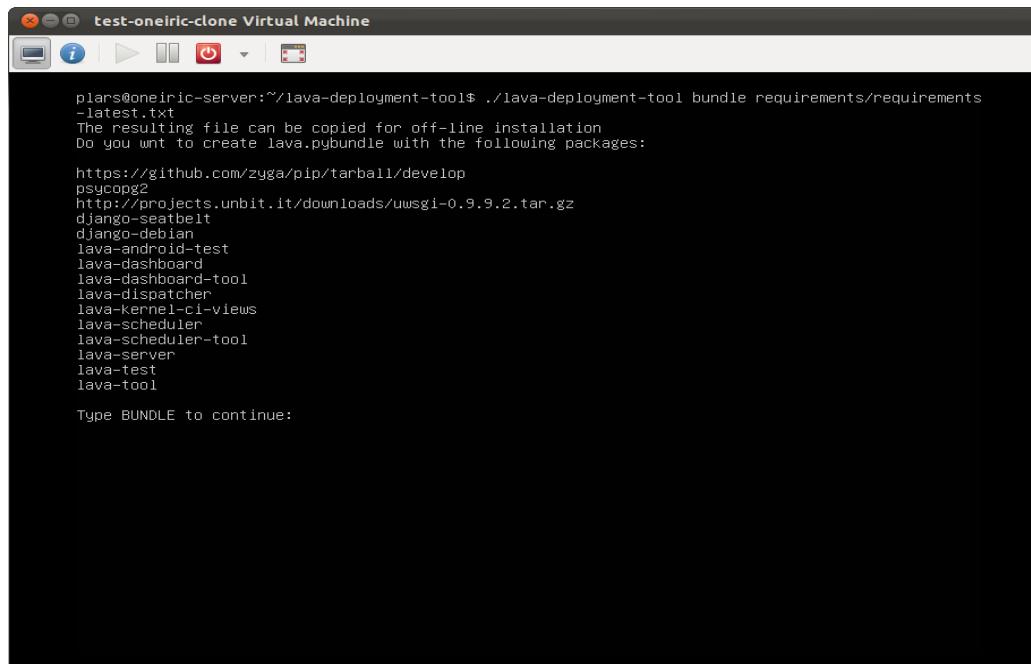

- Installs virtualenv, pip, uwsgi and other dependencies that will be needed

Installing LAVA

\$ lava-development-tool bundle requirements/requirements-latest.txt

- Creates a bundle of software specified in the requirements file
- Also downloads dependencies
- Bundle can be moved to any system and installed later
- Can be used with python package index (pypi) or source repositories
- Can also be downloaded from <https://launchpad.net/lava-project/+download>

```
piars@oneiric-server:~/lava-deployment-tool$ ./lava-deployment-tool bundle requirements/requirements-latest.txt
The resulting file can be copied for off-line installation
Do you want to create lava.pybundle with the following packages:
https://github.com/zyga/pip/tarball/develop
psycopg2
http://projects.unbit.it/downloads/uwsgi-0.9.9.2.tar.gz
django-seatbelt
django-debian
lava-android-test
lava-dashboard
lava-dashboard-tool
lava-dispatcher
lava-kernel-ci-views
lava-scheduler
lava-scheduler-tool
lava-server
lava-test
lava-tool
Type BUNDLE to continue:
```

Installing LAVA

```
$ lava-deployment-tool install myinstance lava.pybundle
```

- Installs the software downloaded into the bundle
- Creates databases
- Runs migrations

```
plars@oneiric-server:~/lava-deployment-tool$ ./lava-deployment-tool install test lava.pybundle
=====
LAVA Deployment Tool
=====

Instance Configuration
-----

Before configuring your instance we need to ask you a few questions
The defaults are safe so feel free to use them without any changes

Note: it is safe to CTRL-C at this stage!

User account configuration
~~~~~
We need to create a system user for this instance:
System user account configuration

User name:      'lava-test'
User description: 'User for LAVA instance test'

next  - Use the user name as is
edit  - Edit the user name
Please please decide what to do:
```

Creating an Admin user

- The admin user can access the django admin panel
- give permissions to other users
- add bundle streams, devices, device_types, etc

First, setup the virtual environment:

```
$ cd /srv/lava/instances/instance_name
```

```
$ . bin/activate
```

Create the user, answer a few questions:

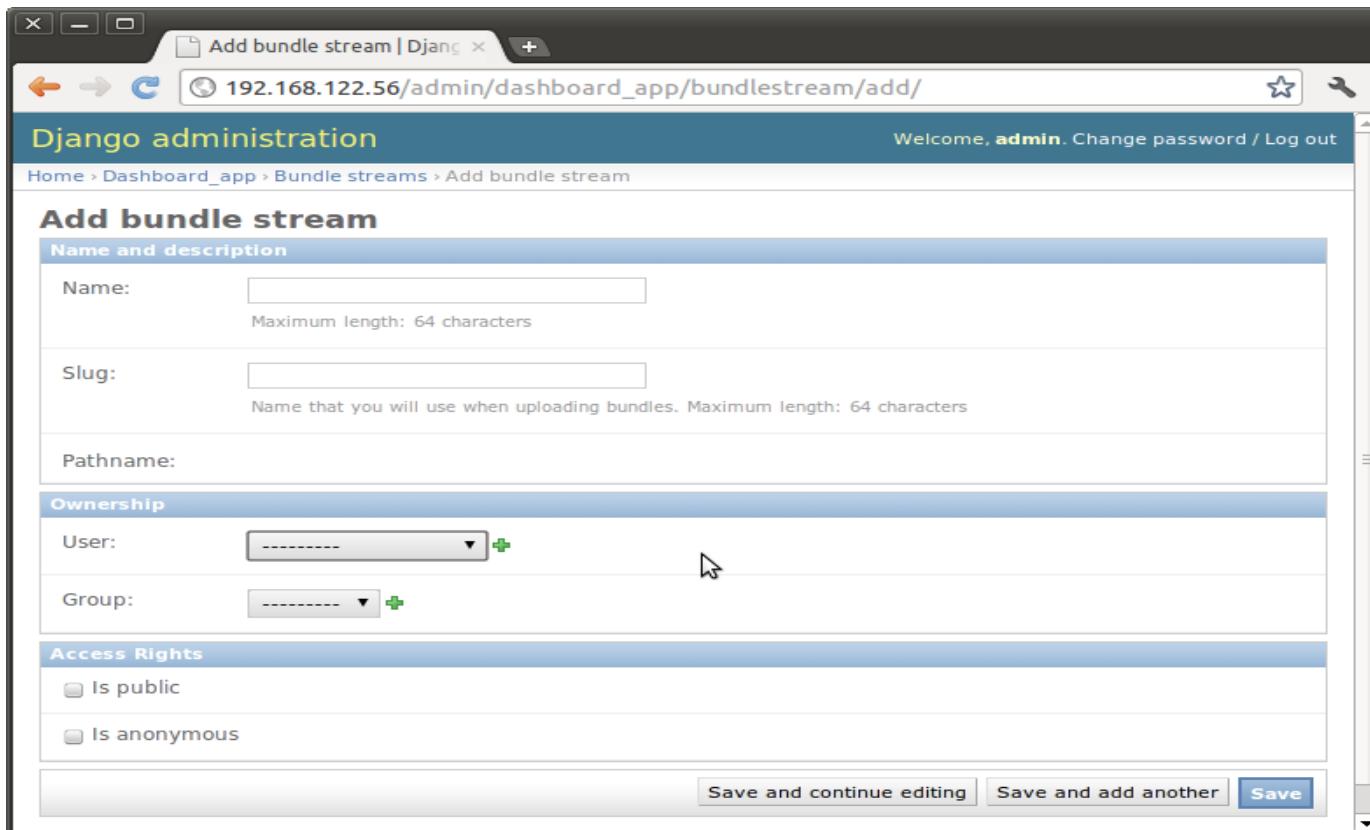

```
$ lava-server manage createsuperuser
```

Make a Bundle Stream

- Can be done from either the admin tool, or the command line

```
$ lava-dashboard-tool make-stream --dashboard-url  
http://localhost/RPC2 /anonymous/test/
```

Pushing a Test Result

- Normally this would happen as part of your test job

```
$ lava-dashboard-tool put --dashboard-
url=http://localhost/RPC2 example.bundle /anonymous/test/
```

The screenshot shows a web browser window for the LAVA Dashboard. The URL in the address bar is `192.168.122.56/dashboardstreams/anonymous/test/bundles/`. The page title is "LAVA | Dashboard | Bundle". The navigation menu includes "Dashboard", "Kernel CI", "Projects", "Scheduler", "API", and "Documentation". A dropdown for "admin" is open. The main content area shows the following information:

You are here: LAVA » Dashboard » Bundle Streams » Bundles in /anonymous/test/

About

- Pathname:** /anonymous/test/
- Name:** not set

Ownership

This stream is owned by "anonymous-owner"

Access rights

- Stream type:** Anonymous stream ([what is this?](#))
- Read access:** Anyone can download or read test results uploaded here
- Write access:** Anyone can upload test results here

A table titled "Bundles" displays the following data:

Show 25 entries	Bundles	Test Runs	Search:			
Bundle Name	Passes	Fails	Total Results	Uploaded On	Uploaded By	Deserialized?
example.bundle	2246	17	2263	2012-02-14 19:49:42	anonymous user	yes

Showing 1 to 1 of 1 entries

At the bottom of the page, there are links for "LAVA version", "Report a bug", "Source Code", and "Validate HTML". A footer note states: "LAVA Server is free software developed by Linaro. It is distributed under the terms of the GNU Affero General Public License version 3. You have the right to obtain source code of any server side installations of this software that you interact with.."
